MECHANICAL SPECIFICATION

OPERATION

Mode of operation is selected via D.I.L switch 8. When this switch is in the OFF position, the REMOTE INDICATOR mode is selected. In this mode, the unit should share the same address as one of GFE's analogue addressable fire detector, where both units are installed within the same loop and whenever the detector is in alarm, the associated remote indicator will be turned ON by the panel.

When D.I.L switch 8 is in the ON position, the IO mode is selected. In this particular mode, the unit takes one address from the loop and its device type will be I/O unit. It should be included within an I/O group and assigned to either a device or a zone. Whenever the associated device or ZONE is in FIRE condition, the GFE-REM-IND-A included within the assigned I/O group will be activated.
